
ASACERT
ASSESSMENT &
CERTIFICATION

IMPROVE
YOUR
VALUE

The ASACERT Group offers inspection, certification and valuation services, in accordance with international standards ISO/IEC 17020 and ISO/IEC 17021, with the following accreditations: ACCREDIA in Italy, UKAS in United Kingdom and DAC in UAE, as well as notification to the European Community for a CE mark (CE 2021).

ASACERT professionals – distributed all over the country – have specific expertise in this sector, undergoing periodic verification that they are up to date with new methodologies and auditing techniques, changes in industry regulations and introduction of new certification schemes in order to ensure robust, advanced technical assessments. Our experience gained in different areas allows us to offer on one hand timely, specialised responses, and on the other to develop comprehensive services.

We want to be an added value for businesses, contributing to their development and goals.
We support your employees with our expertise and professionalism, by transferring our expertise gained through years of study and work in the field.
We seek continuous improvement, offering those who work with us a tangible, competitive advantage.

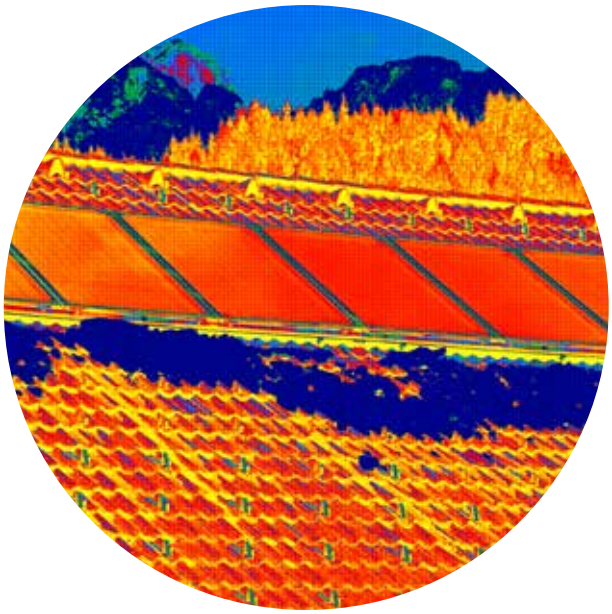
"We are what we repeatedly do.

Excellence, then, is not an act but a habit."

Aristotele

ASACERT stands out in the field of engineering assurance services for its propensity to act as a business partner thanks to continuous research and significant investment in technology and human resources.

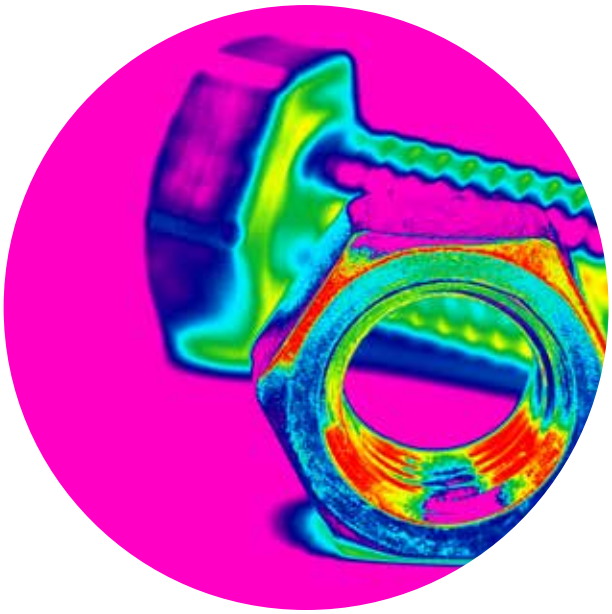
ASACERT uses proven methodologies, to the highest standards in the industry, but also a personalised approach aimed at integrating ourselves into different operating environments, ensuring maximum reliability, competence and confidentiality, with a willingness to listen and pay attention to your business's needs.



Inspection

Our inspection activities are an introduction to compliance monitoring of processes and equipment against current standards to support your business with constant and timely checks of the efficiency and effectiveness of your internal processes, maximising the quality of your work, reducing risks and increasing competitiveness.

ASACERT, thanks to its expert team of professionals, offers a wide range of specialised, custom solutions to businesses of all sizes.



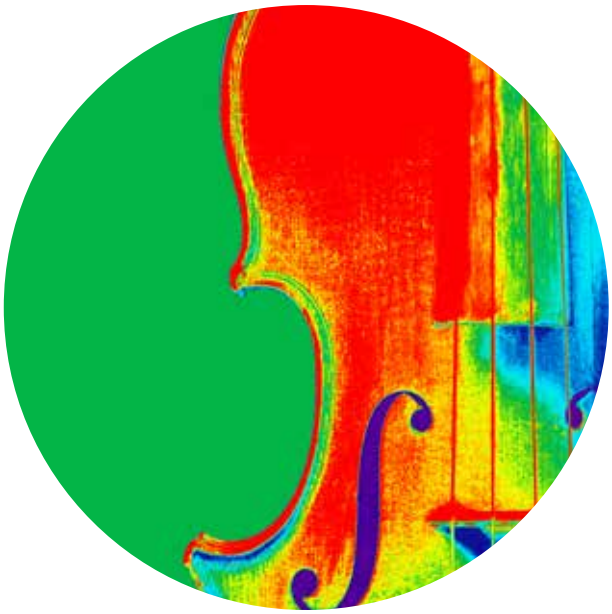
Certification

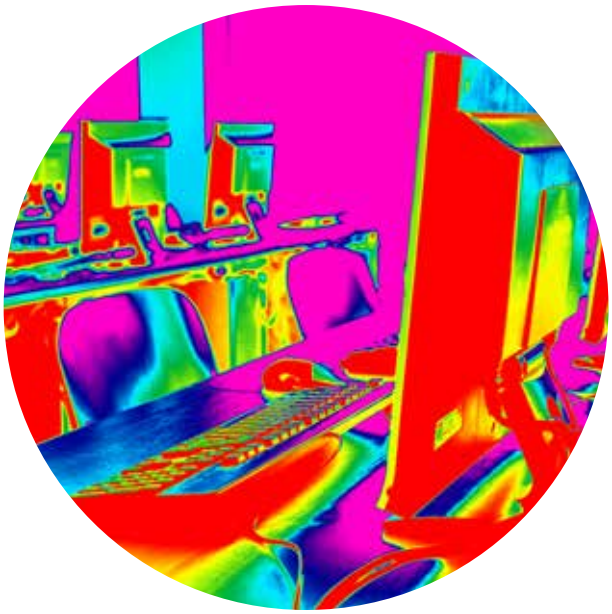
The certification issued by ASACERT ensures the creation, application and maintenance of an excellent management and organisational system that is a company's best calling card to its customers.

Integrated certification testifies to your desire to grow and that you pay the utmost care and attention to the effectiveness of your processes, employee motivation and customer satisfaction, defining work methods and criteria that are consistent with the purpose that your business decides to pursue.

The development of ASACERT isn't just based on budget figures but has its roots in the enhancement and growth of staff. When investment in resources and development exceeds fixed capital investment, it means that your business stops being a place that merely produces and becomes a place that thinks. This allows us to offer substantial added value and a close working relationship with your business.

Fabrizio Capaccioli, *General Manager, ASACERT*



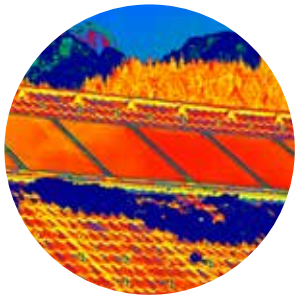


Evaluation

Evaluation and verification activities are systematic and independent processes that are designed to determine, through objective evidence, whether and to what extent the verification objectives were satisfied.
Evaluation is a long and complex process involving accounting, technical, economic, legal, environmental, geographical and market factors. ASACERT, a body recognised for its provision of evaluation services, employs skilled professionals - including independent experts - which enables us to give 360º support to your business.

Training

Investing in skilled staff is beginning a journey of growth and innovation that can determine the success of a business. To this end, ASACERT organises training courses aimed at a wide target audience from very diverse industries.
Our qualification courses and professional courses are accredited and provided in collaboration with prestigious organisations and are characterised by the technical-scientific expertise of our lecturers and for a learning method based on the direct involvement of participants and using practice exercises in the classroom.



INSPECTION

Thanks to our versatility, we are also able to cover less common specialisations, providing services for more complex works. Our ability to start quickly and to manage commissions well allows us to support you as a client and to better respond to your needs.

Francesca Valerio, *ASACERT Inspections Manager*
